

3 7W solar light

DISTRIBUTED PV GENERATION + ESS

Overview

What is a solar landscape light?

Solar landscape lights: These lights—also called spotlights, path lights, or walkway lights—are typically installed in loose soil using an included plastic stake and are meant to illuminate walkways, garden beds, or a patio's perimeter. **Solar deck lights:** These lights come in two common varieties.

What are the different types of solar landscape lights?

There are two main types of solar landscape lights. Spotlight varieties are designed to cast all their light in a single area, much like a spotlight in a theater. Path or walkway varieties typically disperse their light evenly in a circle around the fixture, rather than targeting light into a single spot.

How do solar outdoor lights work?

All solar outdoor lights draw power from the sun during daylight hours and store that power in a battery, or batteries, housed inside the lights. When the sun sets, the lights draw on the batteries to produce light. Some models come on automatically at dusk, while others can or must be turned on manually.

Can solar string lights brighten a patio?

Learn more. A hardworking set of solar string lights will brighten up your patio long after the sun sets. Good outdoor lighting dramatically extends the hours when you can enjoy your yard. It can make things safer by highlighting paths and walkways, or you can use it to showcase standout features like a koi pond or slate patio.
