

About the energy storage cooperation plan

Overview

In April of 2025, the energy storage industry announced a commitment to invest \$100 billion into building and buying American-made batteries. This commitment is expected to generate more than 350,000 jobs and set the U.S. on a pathway to meeting 100% of domestic demand for grid.

In April of 2025, the energy storage industry announced a commitment to invest \$100 billion into building and buying American-made batteries. This commitment is expected to generate more than 350,000 jobs and set the U.S. on a pathway to meeting 100% of domestic demand for grid.

Energy storage has a pivotal role in delivering reliable and affordable power to New Yorkers as we increasingly switch to renewable energy sources and electrify our buildings and transportation systems. Integrating storage in the electric grid, especially in areas with high energy demand, will.

Efforts towards a finalized implementation plan have been ongoing since June 2024, when Governor Hochul first announced that the PSC had approved an Energy Storage Roadmap in furtherance of the state's goal to achieve six gigawatts ("GWs") of energy storage by 2030. The PSC's subsequent 2024 Energy.

To integrate variable renewable energy resources into grids, energy storage is key. Energy storage allows for the increased use of wind and solar power, which can not only increase access to power in developing countries, but also increase the resilience of energy systems, improve grid reliability.

- The U.S. Department of Energy (DOE) today released its draft Energy Storage Strategy and Roadmap (SRM), a plan that provides strategic direction and identifies key opportunities to optimize DOE's investment in future planning of energy storage research, development, demonstration, and deployment.

The U.S. Energy Storage Coalition is an alliance that unites America's leading grid battery manufacturers, energy storage developers, owners, and operators. The Coalition advances policies and solutions to ensure grid reliability amidst historic demand for power, lower energy costs for all.
