

# Cook Islands Super Aluminum Electrolytic Capacitor

## Overview

---

Aluminium electrolytic capacitors are (usually) polarized whose (+) is made of a pure foil with an surface. The aluminum forms a very thin insulating layer of by that acts as the of the capacitor. A non-solid covers the rough surface of the oxide layer, serving in principle as the second electrode ().

Aluminium electrolytic capacitors are (usually) polarized electrolytic capacitors whose anode electrode (+) is made of a pure aluminium foil with an etched surface. The aluminum forms a very thin insulating layer of aluminium oxide by anodization that acts as the dielectric of the capacitor. A non-solid electrolyte covers the rough surface of the oxide layer, serving in principle as the second electrode (cathode) ...
