

How to connect the network cable to the base station room for uninterrupted power supply

Overview

With the unit unplugged, press and hold the connect button on the base station. While still holding the connect button, plug the power (or network cable if PoE) back into the unit. Wait until all three lights on the unit are showing as solid green, and release the connect.

With the unit unplugged, press and hold the connect button on the base station. While still holding the connect button, plug the power (or network cable if PoE) back into the unit. Wait until all three lights on the unit are showing as solid green, and release the connect.

Power off the unit by unplugging the power cord from the back (for PoE, disconnect the network cable) and wait for 15 seconds. With the unit unplugged, press and hold the connect button on the base station. While still holding the connect button, plug the power (or network cable if PoE) back into.

You have two options for power and network connection of the base station. Your system administrator will advise you which one to use. Please pay attention to the radio coverage of the base station. It is up to 300m in unobstructed outdoor areas and up to 50m inside buildings. Do not set up the base.

connected to the Gateway using any cabling. If you need to place the antenna in a different location, you must order the Antenna Relocation Kit and connect the relocation antenna to the Gateway using the provided cables. Antennas are not supplied with antenna cabling. If a Gateway needs to be remote from the.

AirPort is a simple and fast way to access the Internet from anywhere in your home, classroom, or office without cables, additional phone lines, or complicated networking software. AirPort is a wireless local area network (WLAN) technology that provides high-performance wireless communication.

You can follow this YouTube video or the content below to install your station. 1. Start-up of the HYFIX device (HYFIX or OEM version) Plug in the USB-C cable and power the HYFIX device with any 5 volt, 2.5 or 3 amp USB charger. On the HYFIX device, remove the red plastic from the “WiFi-BT” input.

A semi-permanent or permanent base station helps to eliminate the types of error

that can result from repeated daily setups, and ensures that you always use the GNSS antenna at the exact original location. The requirement for a permanent base station setup increases as more receivers that use the.
