## Overview

---

How do I connect multiple solar panels together in series?

How to connect multiple solar panels together in series: Connect the positive (+) cable of one panel to the negative (-) one of the next panel. The female MC4 connector marks a positive cable and the male MC4 is the negative. Continue with the rest until all panels are connected.

How to connect solar panels together in parallel?

In a large system, using parallel configuration becomes costly and complicated because the cable gauge increases greatly. How to connect solar panels together in parallel: Join the positive (+) cables of all the panels into a single one, then do the same with all the negative (-) cables. For this, you will need branch connectors or a combiner box.

What cables do I need for a solar system?

You'll need solar-specific cables rated for outdoor use and UV resistance - usually in red for positive and black for negative connections. For parallel configurations, you'll also need branch connectors or a combiner box. Make sure to choose cables with the proper thickness (gauge) based on your system's current requirements.

How do I choose a solar panel system?

Solar panel system size is generally the main consideration. The number of solar panels in your system affects how you should wire them together. Smaller systems with just a few panels often work well with a simple series connection, like a string of holiday lights.
