

Niue Communications 5g Base Station Airport

Overview

What is a 5G base station?

Interesting Black Technology of 5G Radio Frequency 5G base station is the core equipment of 5G network, which provides wireless coverage and realizes wireless signal transmission between wired communication network and wireless terminal. The architecture and shape of base stations directly affect how 5G networks are deployed.

Why should airports use 5G networks?

Private 5G networks improve passenger transfer times and lower operating cost for airports by enabling self-driving shuttles through reliable and secure communications with remote operations control centers.

What is a 5G baseband unit?

The 5G baseband unit is responsible for NR baseband protocol processing, including the entire user plane (UP) and control plane (CP) protocol processing functions, and provides the backhaul interface (NG interface) with the core network and the interconnection interface between base stations (Xn interface).

Why is Hitachi Rail exhibiting a 5G solution at InnoTrans?

It enabled Hitachi Rail to expand its product and technology portfolio, including enhancing its expertise in urban rail signalling. On 24-27 September, Hitachi Rail will exhibit a range of its urban rail products including its 5G solution at the global rail exhibition, InnoTrans in Berlin.
