

Podgorica BIPV solar glass module

Overview

What is building integrated photovoltaic (BIPV) glass?

Building Integrated Photovoltaic (BIPV) glass is a type of solar glass designed to seamlessly integrate with architectural elements in buildings while generating electricity. It serves both as a structural component of the building and as a renewable energy source.

Can solarvolt™ BIPV glass be used in a building?

Solarvolt™ BIPV glass systems by Vitro Architectural Glass can be integrated into most standard glass building systems, making them particularly suitable for façade and other exterior applications. Every building has unique requirements, and Solarvolt BIPV glass systems can fulfill any building façade need.

What is a BIPV glass system?

Doubling as a building component to enhance sustainability and energy efficiency in commercial buildings, the Solarvolt™ BIPV glass system has been honored for delivering high performance, aesthetics and CO2-free power generation while replacing conventional building materials. Complement classic building materials — or replace them.

What is a solarvolt BIPV glass system?

EXPLORE The Solarvolt BIPV glass system replaces traditional façade cladding materials and enhances commercial building exteriors by providing sunshading, overhead glazing, CO2-free power generation and more.
