A solar-powered container can run lighting, sound systems, medical equipment or communications gear without waiting for grid hookups. Off-grid living and clinics: Even homes and clinics have been built from shipping containers. Case studies show a 40-foot container home powered entirely by solar.

Off-grid inverters are the heart of a solar energy system, converting DC power from solar panels or batteries into usable AC power for your home or business. Whether you're powering a tiny cabin in the woods, a mid-sized home, or a fully off-grid commercial setup, choosing the right inverter.

RPS supplies the shipping container, solar, inverter, GEL or LiFePo battery bank, panel mounting, fully framed windows, insulation, door, exterior + interior paint, flooring, overhead lighting, mini-split + more customizations! RPS can customize the Barebones and Move-In Ready options to any design.

The Off Grid Container also transports the solar PV panels and mountings, the only part of the product which has to be assembled at the customer's site. The on-site installation is undertaken by the Off-Grid Installer team and after all clients are included in the online remote monitoring service.

Live free from the grid with Pulsar Industries' Off-Grid Solar Inverter System — a complete, high-efficiency power solution designed to deliver clean, reliable energy wherever you are. Built for homes, farms, and remote sites, our off-grid systems integrate solar panels, inverters, and lithium.

Solar energy containers encapsulate cutting-edge technology designed to capture

and convert sunlight into usable electricity, particularly in remote or off-grid locations. Comprising solar panels, batteries, inverters, and monitoring systems, these containers offer a self-sustaining power solution.
