IGBT stands for Insulated Gate Bipolar Transistor, and an IGBT inverter is a type of power inverter that utilizes IGBT technology for converting DC power into AC power. IGBTs are semiconductor devices that combine the best characteristics of both bipolar junction transistors (BJTs) and.

With AC reactor (Protect against city power current shock) 2. Double protection. (Two fuses, including the city power security and battery power security) 3. Thyristor charging. (The thyristor charging current is larger than charging board one. The thyristor charging current could reach to 40-50a.

Energy Conversion: The Sofar Solar Inverter efficiently converts direct current (DC) electricity from solar panels into alternating current (AC) electricity, suitable for commercial/home use. Power Management: Designed to handle multiple output power levels ranging from 3kw to 6kw, catering to a.

The Single-phase inverters are designed for residential PV system applications, rating from 3kW to 6kW. All models have unibody housings with aluminum structure which is anodized, increasing durability and effectively preventing corrosion. Equipped with external inductors, the unibody housings can.
