

# South America New Energy Storage

## Overview

---

A new report forecasts that Chile will lead the region in energy storage capacity, followed by Mexico and the Dominican Republic – driven by supportive regulatory frameworks and the growing adoption of hybrid energy projects. From ESS News.

A new report forecasts that Chile will lead the region in energy storage capacity, followed by Mexico and the Dominican Republic – driven by supportive regulatory frameworks and the growing adoption of hybrid energy projects. From ESS News.

As South America's renewable energy sector accelerates toward decarbonization, battery energy storage systems (BESS) have emerged as critical enablers for grid reliability and intermittent resource integration. The region installed approximately 2.5 GW of storage capacity by mid-2025, with.

South America is the continent most dependent on renewable energy, but it is a market that has been difficult for the energy storage industry to penetrate – most South American countries have no storage regulations and offer few incentives, but Chile is leading the way Given that South America is.

South American power grid energy storage solutions are gaining momentum as countries like Chile, Brazil, and Argentina race to balance booming renewable energy production with grid reliability. Imagine a continent where solar panels bake under the Atacama Desert sun while wind turbines dance along.

The report covers South America Energy Storage Market Share and it is segmented by Type (Batteries, Pumped-Storage Hydroelectricity (PSH), Thermal Energy Storage (TES), and Flywheel Energy Storage (FES)), Application (Residential and Commercial & Industrial), and Geography (Brazil, Argentina, and).

You know, South America's installed solar capacity grew by 217% between 2020 and 2024, but here's the kicker – Chile alone wasted enough solar energy in 2023 to power 380,000 homes. This glaring paradox forms the crux of the continent's energy transition challenge. While nations like Brazil and.
