Overview

Substations perform several core functions, and include several key components, including transformers, circuit breakers, switchgear, and battery energy storage systems (BESS). The illustration below highlights the key functions of substations throughout the electrical grid:.

To provide the reliable grid-scale system support to successfully store and distribute the considerable amount of energy harvested from wind and solar farms, BESS substations now require greater battery cell capacity and power density than ever before. This trend has made battery storage a critical.

Energy storage substations represent the future development direction of power grids, integrating modern information systems with traditional energy networks to address the limitations of conventional power systems—such as low energy utilization, limited interactivity, and insufficient.

Achieving successful energy storage in substations involves various critical strategies: 1) selecting appropriate energy storage technologies, 2) integrating with existing infrastructure, 3) considering regulatory and safety guidelines, and 4) optimizing performance through advanced management.

ral and/or large-scale back-up power sup ctricity or other grid services when nee behaviors of battery energy storage systems. Capacity[Ah]: The amount of electric charge the system can deliver to the connect d load while maintaining acceptable volt rging processes of battery cells or modules.

HV Gas Insulated Switchgear (GIS): 72/115/230/420kV+, SF6 insulated, substation transmission. Turn-Key Substations: Hitachi Energy substations with air-insulated switchgear (AIS), gas-insulated switchgear (GIS), or hybrid combination of both technologies. HV Hybrid Switchgear: PASS (Plug and Switch).

Substation architecture can vary, but they generally consist of several key

electrical components including transformers, switchgear, busbars, and more. Each component works in unison to ensure that electricity is safely and efficiently transmitted. High angle view of a modern electrical substation.
