What is a microinverter solar system?

Typically, microinverters are “distributed” inverters. Solar PV systems with microinverters have a small inverter installed for each individual solar panel. Instead of sending energy from every panel to a single inverter, microinverters convert the DC energy to AC energy on the roof itself.

How does a string inverter work?

In a solar PV system that comes with a string inverter, all the solar panels are connected together into “strings.” When the panels generate energy, it all goes to a single inverter, which is generally placed in a residential building, in a garage, or in the basement.
